

Inspectiv Platform

Less noise. More clarity. All in one place. Streamline how you track, validate and fix vulnerabilities.

Severity	Vulnerability title
CRITICAL	Injection: Attacker Can Perform SQL...
HIGH	Injection: Attacker Can Perform SQL...
MEDIUM	Injection: Attacker Can Perform SQL...

BUILT FOR SECURITY TEAMS WHO DON'T HAVE TIME TO WASTE

Inspectiv is a unified AppSec platform that combines Bug Bounty, Pentesting, DAST, and VDP in one streamlined solution. It gives your team the clarity and direction to remediate faster, reduce risk, and meet compliance goals without slowing down your workflow.

WHAT SETS THE PLATFORM APART

No Clutter

No more sifting through low-priority findings. Every issue is triaged, validated, and ranked by real-world risk, so your team isn't wasting cycles.

Developer-Ready Remediation Guidance

Each vulnerability comes with practical, step-by-step remediation guidance. And when you fix it, we validate it, closing the loop without the back-and-forth.

Flexible Workflows

Integrate directly with Jira, Slack, or your internal systems. Use tags and filters to organize findings by source and severity. Whether you need a single view or specific insights, the Inspectiv platform adapts to your workflow.

Dashboard Visibility

Built-in dashboards surface the most valuable metrics: remediation activity over time, vulnerability trends, remediation rate, common vulnerabilities.

A SMARTER WAY TO MANAGE RISK AT SCALE

From startups to enterprises, Inspectiv's platform simplifies vulnerability management so your team can stay ahead of the next threat.

"Inspectiv's bug bounty platform has become a critical part of our AppSec program. Rotating programs each quarter helps uncover high-impact vulnerabilities we wouldn't otherwise discover. It's essential to our proactive risk management approach."

Marshal Jaquish
CTO

An All-in-one AppSec Platform

A SINGLE PLATFORM TO DETECT, DISCOVER, AND REMEDIATE VULNERABILITIES

SCOPING

DETECTION

TRIAGE

RESULTS

TRIAGE THAT GOES FURTHER

In the Inspectiv platform, vulnerabilities are prioritized by risk, and you get clear, actionable instructions for replication and remediation. Our team works directly with researchers to prevent any gaps, and we validate all fixes, closing the loop on remediation and freeing up your time and resources to focus on strategic priorities.

VISUALIZE PERFORMANCE AND RESULTS AT-A-GLANCE

Inspectiv's dashboards give you actionable information and analytics from Bug Bounty, Pentesting, DAST and VDP findings to strengthen your security and compliance programs. Get data on vulnerability remediation rates, plus historical results and reports.

ONE PLATFORM. FOUR WAYS TO DETECT RISK.

BUG BOUNTY

Tap into a global researcher community for always-on testing and verified, high-impact results.

PENTESTING AS A SERVICE

Get expert-led testing with real-time findings, flexible retesting, and clear remediation guidance.

DAST

Scan live apps for common vulnerabilities with automation workflows that fits into your dev cycle.

VDP

Easily manage third-party vulnerability reports with clear submission paths and triaged results.

Inspectiv is an all-in-one AppSec testing platform that simplifies the process of discovering, validating, and remediating vulnerabilities. By offering Bug Bounty, Pentesting, Dynamic Application Security Testing (DAST), and Vulnerability Disclosure (VDP) in a single solution, organizations can reduce risk, maintain compliance, and strengthen their security posture. With streamlined management, minimal operational overhead, and predictable pricing, Inspectiv delivers impactful results that make security testing more efficient and effective.
